2.14 Telephone Surcharges

2.14.1 General

The Company may adjust its rates and charges or impose additional rates and charges on its Customers in order to recover amounts it is required or allowed by governmental or quasi-governmental authorities to collect from or pay to others in support of statutory or regulatory programs.

2.14.2 Public Pay Telephone Surcharge

An undiscountable per call charge is applicable to all interstate, intrastate and international calls that originate from any domestic pay telephone used to access the Company's services. The Public Pay Telephone Surcharge, which is in addition to usage charges, applicable service and surcharges associated with the Company's service as set forth herein, applies for the use of the instrument used to access the Company service and is unrelated to the Company's service accessed from the pay telephone.

Pay telephones include coin-operated and coinless phones owned by local telephone companies, independent companies and other interexchange carriers. The Public Pay Telephone Surcharge applies to the initial completed call and any re-originated call (i.e., using the "#" symbol).

Whenever possible, the Public Pay Telephone Surcharge will appear on the same invoice containing the usage charges for the surcharged call. In cases where proper pay telephone coding digits are not transmitted to the Company prior to completion of a call, the Public Pay Telephone Surcharge may be billed on a subsequent invoice after the Company has obtained information from a carrier that the originating station is an eligible pay telephone.

The Public Pay Telephone Surcharge does not apply to calls placed from pay telephones at which the Customer pays for service by inserting coins during the progress of the call.

The applicable Public Pay Telephone Surcharge is \$0.30 per call.

SECTION 3 – APPLICATION OF RATES

3.1 Introduction

The regulations set forth in this section govern the application of rates for services contained in other sections of this tariff.

3.2 Charges Based on Duration of Use

Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

- A. Calls are measured in durational increments identified for each service. All calls that are fractions of a measurement increment are round up to the next whole unit.
- B. Timing on completed calls begins when the called party answers the call. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s). Timing for operator service person-to-person calls start with completion of the connection to the person called or an acceptable substitute, or to the PBX station called.
- C. Timing terminates on all calls when the calling party hangs up or the Company's network receives an off-hook signal from the terminating carrier.
- D. Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.
- E. All times refer to local time.

SECTION 3 – APPLICATION OF RATES, (CONT'D.)

3.3 Rates Based Upon Distance

Where charges for a service are specified based upon distance, the following rules apply:

- A. Distance between two points is measured as airline distance between the rate centers of the originating and terminating telephone lines. The rate center is a set of geographic coordinates, as referenced in the Local Exchange Routing Guide issued by BellCore, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven-digit telephone number). Where there is no telephone number associated with an access line on the Company's network (such as a dedicated Toll Free Service or WATS access line), the Company will apply the rate center of the Customer's main billing telephone number.
- B. The airline distance between any two rate centers is determined as follows:
1. Obtain the "V" (vertical) and "H" (horizontal) coordinates for each rate center from the above-referenced BellCore document.
 2. Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.
 3. Square each difference obtained in step (2) above.
 4. Add the square of the "V" difference and the square of the "H" difference obtained in step (3) above.
 5. Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.
 6. Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.

SECTION 5 – EXCHANGE ACCESS SERVICE, (CONT'D.)

5.3 Basic Line Service

Basic Line Service provides a Customer with a single, voice-grade telephonic communications channel, which can be used to place or receive one (1) call at a time.

The Company will offer this service and its additional features, where facilities permit, on a resale basis.

5.3.1 Optional Toll Restriction

Customers will have the option of restricting access to Message Toll telephone service from their individual Business Line Service. This charge will not apply if a customer whose toll service was suspended for non-payment of toll charges pays all outstanding charges and requests the Optional Toll Restriction. A description of those services that will be allowed to be completed and those that will be blocked is listed below. The Optional Toll Restriction allows the customer the option to restrict collect and calling card calls from being billed to the restricted line. Toll Restriction will be offered to both Business and Residential customers and it is free of charge for Residential customers.

SECTION 5 – EXCHANGE ACCESS SERVICE, (CONT'D.)

5.3 Basic Line Service, (Cont'd.)

5.3.2 900 Blocking Option

This option is provided at the customer's requests and gives the customer the ability to restrict calls from his/her Business Line Service to 900/976 access codes. This service is provided for use with individual business lines and Centrex lines where facilities permit. The initial blocking of a customer's line or lines will be provided at no charge to the customer. Subsequent blocking (after an intervening elimination of the Blocking Option at the customer's request) will be subject to the nonrecurring charges as set forth in 5.4.2. There is no charge for unblocking.

This option blocks access to all calls dialed as 1 +900 and 0+ 900 from the customer's telephone line. These blocked calls will be directed to a central office announcement. Attempts to place a 900 call using an operator will be denied.

This option does not prevent customers from placing 900 calls from their business line using Operator Service Providers other than the Company's Operator Service. In addition, this option does not prevent customers from placing operator-assisted or credit card calls to 900 services from a line, which is not blocked.

| <u>900 Blocking Option</u> | <u>Non-Recurring Charges</u> |

| Initial Blocking (per line) | N/C |

5.4 Additional Features

Blocking - A calling party may block the passage of his/her telephone number, associated main listed name and voice back of calling identification information to users or subscribers to Additional Features. Which utilize Signaling System 7 technology. Blocking will also prevent call completion through the use of Return Call (*69) Service. Customers have two blocking options as follow:

Per-Call Blocking - To activate Per-Call Blocking, a customer dials a special code prior to placing a call. Blocking will be activated for that outgoing call only. There is no charge for using per-Call Blocking, and it is provided on an unlimited basis. Per-Call Blocking is available to all customers in the Company's serving territory.

Line Blocking - Line Blocking must be added to a customer's line by contacting the Company's Customer Service and having a service order issued. All calls are automatically blocked when a customer subscribes to Line Blocking unless the blocking feature is deactivated. Per line blocking is free of charge for the first instance.

If a customer subscribes to Line Blocking, he/she can deactivate blocking by dialing a special code prior to placing a call. Blocking will be deactivated for that outgoing call only.

As facilities permit, a Line Blocking customer will be provided with a separate code to deactivate blocking, which is different from the per-call blocking code. Where this separate code is not available, the code for per-call blocking and the code to deactivate line blocking will be the same. Line Blocking is available to all customers.

Customers who use either Per-Call Blocking or Line Blocking may be unable to complete calls to Caller ID/Caller ID with Name subscribers who have activated the Anonymous Call Rejection feature of Caller ID/Caller ID with Name. If a customer using blocking calls a Caller ID/Caller ID with Name subscriber who has activated Anonymous Call Rejection, he/she will hear an announcement that the Caller ID/Caller ID with Name subscriber is not accepting blocked calls. There are several ways to complete a call to Caller ID/Caller ID with Name subscriber who has activated Anonymous Call Rejection: (1) place the call through a local operator; (2) place the call with a calling card; or (3) place the call without blocking. Options (1) and (2) involve charges in addition to the cost of the call.

5.4 Additional Features, (Cont'd.)

Call Forwarding - Call Forwarding Station - Allows calls directed to a station line to be routed to a user defined line inside or outside the Customer's telephone system.

Call Forwarding System - Permits calls attempting to terminate to a busy station line to be redirected to a predetermined line inside or outside the Customer's telephone system.

Call Forwarding Busy - Allows incoming calls to a busy station to be routed to a preselected station line or attendant within the same system or outside the system. Intercom calls can be arranged to be forwarded to a number different from Direct Inward Dial ("DID") calls.

Call Forwarding Don't Answer - Allows incoming calls to be automatically routed to a preselected station line or attendant in the same system or outside the system, when the called station is not answered after a preset number of rings. Intercom calls can be arranged to be forwarded to a number different from DID calls.

Call Return (*69) - Stores the number of the most recent incoming call (including unanswered incoming calls) to a Customer's number. This allows a Customer to dial back any missed or unanswered calls.

Call Trace - Allows a Customer to key a code that alerts the networks to trace the last call received. The traced telephone number is automatically sent to the company for storage for a limited amount of time and is then retrievable by legally constituted authorities upon proper request by them. Customer can use this application to combat nuisance calls.

Call Waiting - Permits a line in the talking state to be alerted by a tone when another call is attempting to complete to the line. Audible ringing is returned to the originating line. The service also provides a hold feature that is activated by a switched flash.

Where facilities permit, Tone Block is automatically included with Call Waiting. Tone Block permits Call Waiting subscribers to deactivate Call Waiting prior to initiating a call. The customer deactivates Call Waiting by dialing a special code. The Call Waiting will automatically be reactivated when the call or call attempt is terminated. There is no additional charge for the Tone Block feature of Call Waiting.

SECTION 5 – EXCHANGE ACCESS SERVICE, (CONT'D.)

5.4 Additional Features, (Cont'd.)

Caller ID - Caller ID is an optional service, which allows a customer to see the telephone number of incoming calls. The calling telephone number will be displayed on a customer-provided display unit. The calling telephone number will be displayed between the first and second rings. All telephone numbers, including Non-Published and Non-Listed telephone numbers, will be displayed unless blocked on the originating end. When a calling party is using blocking, the Caller ID subscriber will receive an indication that the number is blocked.

In addition to the ability to see the telephone number of incoming calls, Caller ID Service may also, as facilities permit, provide a customer with the ability to reject calls from callers who have chosen to block the passage of their telephone numbers on outgoing calls. This feature, called Anonymous Call Rejection, can be activated or deactivated as the Caller ID subscriber desires by dialing specific codes. When initially provided Anonymous Call Rejection is deactivated. Anonymous Call Rejection will remain on or off until the customer makes a change. When a caller, who has blocked the passage of his/her telephone number, calls a Caller ID subscriber who has activated Anonymous Call Rejection, he/she will receive an announcement that the customer is not accepting calls from callers who are blocking their telephone number. In addition, in this situation, the Caller ID subscriber's telephone number will not ring.

There are several ways to complete a call to a Caller ID subscriber who has activated Anonymous Call Rejection: (1) place the call through a local operator; (2) place the call using a calling card; or (3) place the call without blocking. Options (1) and (2) involve charges in addition to the cost of the call.

Caller ID Service is available to customers by monthly subscription only, which provides unlimited use of the service.

5.4 Additional Features, (Cont'd.)

Caller ID with Name - Caller ID with Name is an optional service which, in addition to providing the same capabilities as Caller ID, allows a customer to see the main listed name associated with the telephone number of incoming calls. All telephone numbers, including Non-Published and Non-Listed telephone numbers, will be displayed unless blocked on the originating end. When a calling party is using blocking, the Caller ID with Name subscriber will receive an indication that the name and number are blocked.

Caller ID with Name may also, as facilities permit, provide a customer with Anonymous Call Rejection, the feature that provides the ability to reject calls from callers who have chosen to block the passage of their telephone numbers and associated main listed names on outgoing calls.

Caller ID with Name is available to customers by monthly subscription only, which provides unlimited use of the service.

Distinctive Ringing - This feature enables a user to determine the source of an incoming call from a distinctive ring.

Operator Screening - Provides the Customer with a method of denying all third number billed and collect calls to a specific telephone number, provided the transmitting operator checks their validation database.

Priority Call - This PBX feature allows an urgent intercom voice call to be made when the called telephone is busy or has Do Not Disturb activated.

Repeat Dialing - Allows a Customer to automatically redial the last number dialed. This is accomplished by the Customer activating a code. The network periodically tests the busy/free status of the called line for up to thirty (30) minutes until both lines are found free and then redirects the call for the Customer. Once the busy line is free, the call is automatically redialed and the Customer is notified via a distinctive ring. The following types of calls cannot be automatically redialed:

- Calls to toll-free service numbers;
- Calls to 900 service numbers;
- Calls preceded by an interexchange carrier access code;
- International calls;
- Calls to Directory Assistance; and
- Calls to 911.

In addition to the charges provided in this tariff and other intrastate toll tariffs in which this Company concurs, a surcharge will apply to all residence and business access lines served by this Company. This surcharge applies regardless of whether or not the access line uses the PA TRS.

The surcharge serves as the funding vehicle for the operation of the PA TRS, and shall be calculated by the Pennsylvania Public Utility Commission (the Commission). The Commission shall compute the PA TRS surcharge each year and notify local exchange carriers of the surcharge amount to be applied for the twelve-month period commencing with July 1 of each year.

The Commission may revise the surcharge more frequently than annually at its discretion. Tariff revisions will be filed whenever the Commission calculates a new surcharge amount and notifies the Company.

The following surcharge rates apply to all customer bills issued on or after July 1, 2008. (C)

9.12 IntraLATA Toll Presubscription

9.12.1 IntraLATA Presubscription is a procedure whereby a Customer designates to the Company the IntraLATA Toll Provider (ITP) which the Customer wishes to be the carrier of choice for intraLATA toll calls. Such calls are automatically directed to the designated carrier without the need to use carrier access codes of additional dialing to direct calls to the designated carrier. IntraLATA presubscription does not prevent a Customer, who has presubscribed to an intraLATA toll carrier, from using carrier access codes or additional dialing to direct calls to an alternative intraLATA toll carrier on a per call basis.

Each carrier will have one or more access codes assigned to it for various types of service. When an end user selects a carrier as its preferred intraLATA toll provider, only one access code of that carrier may be incorporated into the switching system of the Company permitting access to that carrier by the end user without dialing an access code. Should the same end user wish to use other services of the same carrier, it will be necessary for the end user to dial the necessary access code(s) to reach that carrier's other service(s).

An ITP must use Feature Group D (FGD) Switched Access Service to qualify as an intraLATA toll provider unless prior arrangements have been made with or by the Company. IntraLATA toll providers must submit an Access Service Request (ASR) prior to the intraLATA toll presubscription conversion date or prior to the date on which the carrier proposes to begin participating intraLATA toll presubscription, unless prior arrangements have been made with the Company.

Selection of an intraLATA toll provider by an end user is subject to the terms and conditions following.

- .2 New end users who subscribe to service after the presubscription implementation date (including an existing Customer who orders an additional line) will be asked to select a primary ITP when they place an order for Company Exchange Service. IF a Customer cannot decide upon an intraLATA toll carrier at the time, the Company may extend a 30-day period following completion of the service request to make an intraLATA PIC choice without charge. In the interim, the Customer will be assigned a 'No-PIC' and will have dial an access code to make intraLATA toll calls.

9.12.2 (Cont'd.)

- .3 If an ITP elects to discontinue Feature Group D service after implementation of the intraLATA toll presubscription option, the ITP is obligated to contact, in writing, all end users who have selected the canceling ITP as their preferred intraLATA toll provider. The ITP must inform the end users that it is canceling its Feature Group D service, request that the end user select a new ITP, and state that the canceling ITP will pay the PIC change charge as provided herein. The ITP must provide written notification to the Company that this activity has taken place.

Following the ITP's discontinuance of service, the Company will bill the canceling ITP the change charge for each end user that is currently designated to the ITP at the time of discontinuance.

- .4 An authorized PIC change is a change in the presubscribed intraLATA toll provider that the end user denies authorizing. PIC disputes for end users are resolved through an investigative process.

If an unauthorized change in intraLATA presubscription occurs, the ITP making the unauthorized change will be assessed a charge for unauthorized change in presubscription as provided in 9.12.7 following. In addition, the ITP will be assessed the applicable charge for returning the end user to their preferred intraLATA toll provider.

9.12.4 End User Charge Discrepancy

.1 When a discrepancy is determined regarding an end user's designation of a preferred intraLATA toll carrier, following applies depending upon the situation described:

- * A signed letter of authorization takes precedence over any order other than Subsequent, direct customer contact with the Company.
- * When two or more orders are received for an end user line generated by telemarketing, the date field on the mechanized record used to transmit PIC change information will be used as the PIC authorization date. The order with the latest application date/time determines Customer choice.
- * If an end user denies requesting a change in intraLATA toll presubscription as submitted by an ITP, and the ITP is unable to produce a letter of authorization, signed by the end user, the ITP will be assessed all applicable change charges. The nonrecurring change charges are provided herein. The ITP will also be assessed the intraLATA toll presubscription change charge as specified herein, which was previously billed to the end user.

.2 Verification of Orders for Telemarketing

Neither the ITP or the Company shall submit a PIC change order generated by outbound telemarketing unless and until the order has first been confirmed in Accordance with the FCC's current anti-slamming practices and procedures.
